Our use is only to familiarize the reader with that language since it often changes terms, and can become confusing. I understand your frautration with the editing since this is not being published as a piece in response to a press release, which is a more common way of reading these types of reports, but is being published as an investigation which requires our organization to be more conclusive, and therefore question moral truths that we think might of been broken during the environmental  assesment or by the DEP when recovering the documents.

> We appreciate anyone's participation in helping us find out more about this, since there is no plan to perform any further studies. And we have not been aware of studies on Towanda Creek. Also, one person pointed out that it was washed away because of heavy rains, which is also our assumption and we wanted be sure that's the case and ask around before we go on with this investigation.

I would think the PFBC biologist responsible for that area would have an opinion on any impacts.  While DEP is not doing any followups the biologist would have ongoing knowledge of the stream's health.
