Anyone fish this stretch since the dam has been removed? Have fish been holding there?

I'm not familiar with this particular dam, so I can't say whether its removal will be beneficial for trout or not.

But there is a very common assumption that ALL dam removals will benefit trout populations. That assumption is definitely wrong. Each dam is different. In some cases dam removal is very benecial to trout populations. In other cases it is highly detrimental. It depends on a lot of individual factors about the dam and the stream and the specific location, etc.
