Dude,

For long casts across stream use an indicator and mend to the indicator to get a good drift. 40' may be too long of a cast, even with an indicator. The shorter the cast the easier it is to get a good drift. Instead of standing in one spot to cover an entire pool or run, you probably would have more success carefully wading into position and shortening up on your casts. With Czech nymphing, you get very close to the fish, a rod length away, and lead the flies through the drift.
