Use a nail knot with tapered (blood knot) sections of maxima. I typically use 4x if I can most of the year for tippet.

Although- I do use 5x on dries a decent amount of the time..

I usually don't go below 5x.

6x on really small flies- had success with the Harvey slack line for tricos on Spring Creek.

Since this is really my 5th or 6th year of being serious about fly fishing I am still experimenting.

Leader calc is a good guide.
