For nymphs I typically use 2-3 ft of 25lb maxima 2-3 ft of 12lb mono and a length of tippet. I use blood knots and sometimes a small swivel to connect the mono to the tippet.

Ideally I'll use a hand tied leader for dries or a length of 10lb for streamers but I'm usually lazy and just use whatever I have on at the time.

A good tip on using blood knots for lines that have very different diameters is to just double over the smaller line before tying.
