I have never really noticed a big difference. I go with the one I can turn around and use again. I used to thin I roll cast better with my DT. Then I got a WF for free and use it and it rolls fine. I do think as far as the right line for the rod, though, if you have a rod labeled as a 5/6wt rod. The WF in a 5wt and the DT in a 6wt seems to feel best.
