I'd say more like 40-45 depending on the line...That's all one really needs for short line work..IMO, we're really talking about two different applications..WF for big water (distance casting)..DT for med to small streams..That's how I rig up..You could cut excess line off your wf too, reducing weight..

85% of my fishing takes place within the bounds of 40ft of fly line..Don't forget leader adds average 9 foot..
