Fixing Waders

I have a pair of breathable waders that I've had for about 3 years now. This past spring they started leaking on one of the seems in my left leg. There doesn't seem to be a large visible tear. Do you think I can just use a seam sealer to cover all the seems? If so, do they make seam sealer for waders or do you think I can just use one for tent material? I have plenty of that sitting around.
