Underlining a 5/6 to a 4wt??? That depends on several different things. If you plan on fishing small flies and short distance casting, I think you will turn it into a broomstick. However, I've never cast a TFO. If it was a straight 5wt I would say you have a good chance of making a fast 4 wt depending on your fishing technique and casting stroke. IMO, I think manufacturers underline already, unless you're fish the same amount of line that they used to rate the tape.
