Fly Fishing Pressured Water, by Lloyd Gonzales, is the most innovative book on flyfishing I've seen to date. Not only does it offer some new and very effective patterns, it reveals hatches we often are not aware of and ways to fish them. Some of the patterns are too complex for most of us to tie regularly, but many patterns, such as the shucking dun mayfly are not only easy to tie, once you practice making the wings a bit, but they also are bombproof. Our local olive eating trout love this pattern and you can catch trout after trout after trout on it without it getting slimed up or coming apart. I've learned more from this book than from any other I own.
