Thought I'd refresh this thread as Ozzie has come out with his third video which I recently purchased at Somerset. I'm a huge fan of his first two underwater videos: "Discovery" and "The Underwater World of Trout - Feeding Lies." His new video is "Trout Vision and Refraction." The first two are, in my estimation, so enjoyable due to the underwater trout filming and how this sheds light on fish feeding and behavior. To be honest, Ozzie's latest video was a disappointment in my view. It certainly offers a lot of info on the subject of a trout's window and visual perspective but the underwater video is almost entirely recycled stuff from the earlier versions. In short, if you want to learn about trout vision, this a good video but if you're expecting to see lots of new underwater filmography on the level of his previous videos, save your money and skip this latest DVD.
