leader to fly line connection

Hi All -

I brand spanking new to this fly fishing business so I hope this question makes some kind of sense.

I have a tapered leader with a loop on the end. I want to do a loop to loop connection to my fly line. I figure I want to nail knot a 6" piece of line to my fly line and give it a loop. What I can't figure out is what size (how heavy) that small piece of line should be and is it just a piece of mono?. I'm using WF5F fly line, have a 5X leader.

Thanks
