I hope folks don't mind I don't start a new thread but I have another question. Knowledge or at least perceived knowledge is dangerous.

I currently have as mentioned before WF5F line. So if I want to use a say size 20 - 22 fly my line I figure should be 4 weight. Could I put 4 weight line with more backing on a reel that rates at wt. 5-6 and rates at 120 yds./20 lb. w/WF6?

BTW, my wife thinks I'm studying for a masters degree with all the reading and research. Won't she be disappointed when she finds out I'm just trying to catch fish. 😬 😊
