See, I am not sure I agree about managing for the exception. Some anglers want to go out once and catch 5 fish, then they are done for the year. The choice is, do we stop the thousands who want to do this because a dozen or so will take 5 fish 3 times a week all season? I'm just throwing the numbers out to make the point. If we set a limit of 3 fish just because some people will take more than their "fair share" we deprive the more casual harvester the ability to bring home a family meal.
