DGC,

Thanks for the heads up on the government site! I've got info on how they drill and what most of the impacts are. I am leaning to restricting it to just PA. I even have the trout unlimited position paper on it. The class is technical writing so I'm supposed to maintain some neutrality. As for myself. I think that there has to be a way to mine responsibly and protect the environment at the same time. Anyway, thanks for taking the time to answer back guys!
