Another thing that I didn't see anyone post yet is about the M shale being mildly radioactive. Not sure how bad it is, but I think this is one of the reasons it has been stopped in some places. What to do with radioactive tailings.

I don't know a lot about that. Just bits and pieces. Antil drilling probably says it is worse than it is, and drillers probably say nothing to worry about. It sure would be nice to see some actual scientific info on it.
