Another great way to skitter dries is through a downstream and across approach while employing a leader with a dropper about 36" from the lead fly. I usually use a Henryville on the dropper, and a wet fly on the point. After making the cast, hold the rod high so that the dropper fly bounces on the surface while the point fly creates tension. Many times when a trout misses the dropper fly, you can nab 'em on the point fly if you have enough patience to hold back on the first strike.

That's cheatin! 😊 Sounds like fun, I'm gunna give that a try next chance I get.
