add an egg and a hopper to a fish's list and that's pretty good. I think though depending on if you tend to fish a few waters very often you could narrow it down. I need sulfurs probably 2 days a year. I can fish an Elk Hair Caddis wet or dry. Trim all but the very last hair clump by the head and it's an emerger. I tie foam spiders for bluegills in the spring. Trim the legs, it's a beetle. Sometimes a good sharp nipper in your vest means you have a lot more patterns than you started with, with a little stream side trimming.
