The Swatara (like any stream) could have holdover trout if the conditions are right. That would include many factors such as food supply, oxygen content, habitat, etc. But one of the largest factors would be temperature. If the water gets too warm and the trout can't find cooler water, they'll expire. If there are tribs that offer refuge, then they could hold over.

If we have a spring/summer like we did last year, it's quite possible there could be holdovers in many places that don't see holdovers. We didn't get extended periods of hot weather and had more than ample rain which helped the situation.
