I pretty much agree, but I doubt that lends any credence to your thoughts. I use 5X most of the time. This covers flies from 12-18. At 18 and smaller, I would consider using 6X. I can thread tricos on 6X with no problem. On #12 and larger I would consider using 4X and any nymphing rig if started from scratch would end in 4X tippet. I will use 3X for streamers.
