That's the same basic tool as the nippers version I have, just with only the nail knot functionality: No, there is no problem with it at all. In the beginning, I used it so infrequently I had to track down instructions, but used nail knots very frequently (new lines and changing out the old attachment methods), I have no problem.

I've even doubled up the fly line and then laid down two nail knots in a row for rear loops (put a bimini twist into the backing), and I'm pleased as punch.
