Only the fish can tell you if it will work, but my guess is it will. I've caught fish on far worse than that! I'd fish it.

FWIW - a pretty good match for the GD dun underside body color is Fly-Rite #41. I also like moose body hair for the tails, as it helps float the heft of such a big azzed bug - I tie 6 fibers for the tail, and split them around a dubbing ball. I also use wood duck wings, and just grizzly hackle.

A friend of mine ties giant size GD Klinkhammers, and she kicks butt with those things.

If you make it to the Jam on Friday night, maybe we can tie some if we're sober enough. 😊
