I know the 2 Marcellus wells drilled on game lands sites thus far haven't produced real well, and thus the land use was wasted for very little in return money. That might be what he meant by 0 for 2. There could have been environmental issues on top of that, I don't know, but I too would be interested in seeing any info.

Quote:

From what I can tell, we absolutely have real alternative energy that would compete and crush big oil and gas.

Nuclear?
