Chaz

This is just one of many things that is wrong with this Study. After my review, I went through it again and had trouble reading it because of all my scribble marks noting bad or mis-information.

This study will do more harm than good for PA's wild trout population. The PFBC did a poor job - NO HORRIBLE - at determining what questions to ask the anglers. Evidence of absence is not absence of evidence.

You can not even properly evaluate the significance of wild trout to PA's economy because the PFBC did not even survey the more popular regulated waters. Therefore, the information is moot. Why even bother?????

Standard PFBC 1/2 A\$\$ed approach. 🤔
