I like the Po, and really think it could be a better fishery at producing consistently big fish if management (PFBC) was a bit better. The shame of it is, is really just gets treated like a stockie receptacle. Adults/fingerlings....of all species. What a joke.

And not sure if any of you guys, take a look at the temp release from Beltzville currently, and then compare to the data available long term on the USGS site. Right now it is running a full 5-7F warmer than ever before. Surely this is not due to running out of cold water. It is there. In my opinion there is no reason for this, and the PFBC is not doing their job holding the Corps feet to fire so to speak with how they are running the water.

This stream is a poster child of apathy for the PFBC.
