If you tie, tie with bead heads.

If you buy them, buy them with beads.

If you need extra weight you can add it, but in the slower or shallower pools you won't need as much weight, and beads get the buggers under water.

When I first started FFing and Fly tying, the first things I started with were buggers. I still have my first fly I ever tied, it's a bugger.

They are versatile and anyone who tells you that they don't work would be lying, or haven't used them properly, and I don't know if they can be used in any wrong way. Worked when I first started to fly fish, they work now.

The best time is right after a heavy rain in a larger river, after the mountain runoff turns the water brown. The large pools.

Try it. It will give you enjoyment when you match the color bugger with the nymphs, fish, or crustaceans that are the best food in the water. Good Luck.
