Anyone know why the Upper Sections of the PO are closed, I used to fish there and it was way better fishing for wild fish then stockies. IMHO it would be a wild trout stream without stocking headwaters to mouth even if the dam wasn't there. As for the Lehigh it probably only needs about 250cfs all summer of cold water, the trouble is it's managed for only one thing, that is rafting.

A fine brook trout fishery was taken away from us when the dam was built.
