SMB reproductive succes was extremely poor throughout the Schuylkill R. last year (see link) and was poor in 2010 in roughly the lower half of the river from Union Township Park, Berks Co, located below Birdsboro, downstream to Bridgeport, the most downstream sampling site. Best sites in the lower river were Bridgeport and Kinnelworth (Topath Park). Upstream from Birdsboro, starting at Fritz Island, below Reading, and continuing up to Port Clinton, reproductive success was very good.
