Deposit to Junction? You are a friggin' MAN George. That's got to be close to 14 miles of river! If it was pumping around 900 cfs, that's still a long enough day.

We saw very, very few bugs the last 2 times up. Typically, you'd see the sulphurs in the upper section but I think I saw more near the junction pool last time up. Not sure what's up there but it got a few risers going.

We also had zippo on streamers. I hate to admit it but the nymphing was working on my last 2 trips up. Hope we see some olives, caddis, october caddis and iso's in September. Also hoping they don't drain the lake that weekend! WB, muddy and at 1600 cfs is no good!
