Since I generally fish the Wissahickon. I use a 8 1/2 ft 4 pc 5 wgt I built on a Cabela's blank. The biggest bass I've run into there was a shade under 17 inches, but on average they're in the 8-10 inch range. Even if I fish a bigger river like the Schuylkill or Susquehanna, or lake, I use a 9 ft 6 wgt. I didn't even get my 8 wgt wet on my trip to Ontario in July, used the 6 wgt exclusively. Ending up hooking and landing more pike than bass on it. I have floating and intermediate sinking for the 5 wgt, and floating, intermediate and full sinking for the 6 wgt. Personal preference, I just think an 8 wgt is overkill for smallies in this area. I hear the arguments that you need the heavier rod for large flies. Given the abundance of light weight materials, and tying styles available it's quite easy to tie a large fly that can be cast for a 6 wgt. I think the picture is attached. This is what I used all week in Ontario.
