What size tippet was on you leader? For sunnies I would use a #12 foam beetle or stimulator on a 7.5', 4x leader. The heavy, short leader will make it easier to turn over the fly, and thicker tippet is easier to untangle.

I like the stimulator for panfish, but you have to revive it after every hook up.

On another thread someone mentioned Joan Wulff's casting analogy: Imagine that you fly rod is a paint brush, and you're flicking paint on a wall in front of you, then behind you.
