I have an oak desk I got for nothing from the offices of one of the manufacturing companies where I used to work.

It's huge. Too huge to be truthful. 60" wide by about 40" deep by about 30" high.

2 guys can move it, but only if you take all 7 of the drawers out of it first.

It's way too big. The only useful purpose it serves is to help me lose stuff in its huge drawers and then I go and buy more. I was down there yesterday (it's in the basement, but I doubt it's ever coming out) and learned I now have 11 of those little \$2.00 bobbin threaders.

It's too big...

I hate drawers too...but on the plus side, you have the makings of a sheepshead "threader" flybox. Stack all your small flies on each of the threaders. One pattern per and toss them in an Altoids tin.
