Global Warming is here!! unless you are employed by a oil company! then you have to deny it. And the earth is very overpopulated. Most agree that 500 mil would be OK and the limit, but now we have twelve times that many!! Over 6 billion!

The fishing has been going downhill for the last 20 years, but we still go fishing..... we have to do something we love to do.

I smell the stink also, but I still flyfish anyway. The rich capitalists will tell ya to buy a couple thousand acres of Montana streams..... or just fly to Alaska every weekend and the fishing will be fine!

Just pretend it's not there and everything will be fine. Everything is relative, you can still enjoy your local waters.

Even a couple sick fish is fun to catch with a lite flyrod!

Soon fishing will only be a memory! So enjoy while you can.
