Remember to use a "tack cloth" after you sand to get all the dust up. I'd sand down to about a 150 grit then wipe it with a wet cloth to raise the grain and sand again. That way you will get a really nice smooth surface to apply the finish on. Use a "tack cloth" in between finish coats too if you do any additional sanding. If you hit a Home Depot or Lowes you can find the Minwax stuff and see all the different stain colors on their display. I'm sure you will find one that you like.
