Have you look at those desk top tying stations...my step fater made me one once and I used it for years. Had dowels along hte back for thread and other spools...and holes along he one side to stick tools into. Had a large flat arm on the right side to attach my vice to. I added a larger hole to put a film canister with steel wool in to clean my bodkin and another to fit a bottle of head cement without being able to knock it over. I also added white contact paper to the bottom for better contrast. It was nice because I also had a small apartment and could lust put it wherever I needed to but had a prepared desktop to tie on. Now that I think about it one of those would save me some set up time now...If you are handy you could make one yourself.

Kind of like this:
