I agree with FrequentTyer, hope santa brings you Charlies book. But starting with a wooly bugger is a good way to get your fingers and hands trained. Not mention that the larger size helps you get proportions and a handle on how to hold and transfer materials. As for using them, after a dozen of them your be ready to move on to a pheasant tail or green weenie. So consider them growing pains and who really doesn't have a woolly bugger in their flybox??
