I have an excellent book on hatches...Hatch Guide for New England Streams by Thomas Ames, Jr. which covers most of the hatches here in PA. It's one of the few books that I've read cover to cover and some of it several times. I also have The Fly Tier's Benchside Reference by Tead Leson and Jim Schollmeyer. I like the book and it is extremely well illustrated. I just wanted to get some magazines that maybe had more up to date stuff or just to get some more ideas. I like 2 or 3 page articles that kind of get straight to the point and don't just drag it out. Yes sometimes there's some things missed but I just have that short of an attention span when it comes to reading. I'd much rather be fishing or tying than sitting with a book in my hand.

salvelinusfontinalis...How well is the Complete Guide to Eastern Hatches by Tom Fuller illustrated? Is it more facts on the hatches or does it actually show the insects at various stages? I like the facts but pictures help a lot with a hatch book. I might look into that book.
