I understand what you'r saying. There are 5 or 6 "natural reproduction" streams around me and as far as I know TU has never (N E V E R!!) worked on a stream of this size. (2'-3' wide, middle of nowhere, minimal if any native brookies present but could support a nice poulation with it's clean, clear water is helped with deeper pools, ect) These are things I have also wondered while fishing these small, sometimes nameless streams.
