I used rain-x for the first time this week. it worked the best of anything else I tried.

One thing I found is that taking the time to clean your rod and guides of dirt and lime scale (look carefully, you'll see it) before going out and prior to adding rain-x, helps.

Rain-x wears off like all the rest though, but seemed to last longer and you don't have the mess of waxy/oil-like substances.
