Personally, I think you guys are on to something. But... if no one wants to help you, not even TU, then I say a couple of days next summer and do it your self (position rocks, deepen pools, move saplings to create cover). Then give that stream a year and return next year for your own personal Class A that everyone doesn't think holds brookies. Besides you put the time in, who do you think should get the spoils.....?

If I had a stream around my land, I would have done it years ago.
