thanks MKern but at this point its just a discussion. i cant just work on a stream though. a side from clean-up, changing pools and stream habitat with out the proper plans and orginazations can lead to hefty fines and penaltys. i just wondered if its something to bring up in the future. i guess the first question to ask is why is the trout pop so low. like nitrate in headwaters, or holding water, or not enough food. to see if the problem can even be fixed. just imagine it though. all the streams on the natural reproduction list being class a. that would be amazing. 🤔
