Billions? Seriously?

Sorry becker, but the bucket biology is getting ridiculous IMO. I'm with rhinestone jerry on this one.

You might reconsider. I did not say a billion in the first year of the program. I just said Billions, meaning over many years. I forget the exact #, but they say a healthy fisherie brings 1 million dollars for every mile of resources. If thats true, how many miles long are the Lehigh and Delaware and tribs? Think that will add up to a billion pretty fast, no?

Don't be so quick to say I am wrong just because it's me 😊
