For the next month or so I plan on doing alot of short line nymphing with the higher more stained water you can get much closer to the drifts than later in the season.

So my question to you is what are your leader designs like for the 7 to 8 foot leaders like?

Yes, heavy but sections- perhaps 1 or 2 sections of stiff maxima or amnesia then a long piece of say 2x, 3x, or 4x.

What knots you using to connect to the maxima or annesia- triple surgeons? The diameters of the connections can be so far off from each other.
