Ok I got a fix for that line.... Go to one of your big box hardware stores and look for rubberized/polly dip in a can. With me so far? It's the stuff used to put a rubber/plastic coating on tools. set yourself up some kinda jig so you can pull the line through the stuff and not let it touch anything else till it dries..... He, you asked! It should only cost you bout...? Well maybe you just better get a new line.

Just try'n to help.
