The cicada hatch gave me considerable trouble in 2008. My cicada imitations were too small, and my 3x tippet was too light. Broke off what would have been my biggest trout ever.

What size were your flies? 3x sounds about right to me. I tied my flies with 94840 Mustad size 4. I thought at times mine were too big. The trout would hit the fly but many times could'nt seem to get that big bug in their mouth. I did however manage to catch quite a few. I used 2x and 3x tippet on my Loomis GL3 9' 6 wt.. It was really fun casting what seemed like a Bass bug to those Trout.
