well the trout in question again are not on closed land. The people of this forum hate everything Donny Beaver stands for in regards to trout fishing. So your last comment has absolutely no merit. The fish in question are tougher than you think. Aside from limestone spring creeks and a few very fertile freestoners, my experience has been that holdover stocked trout are far harder to catch than wild trout.

You make a lot of baseless assumptions. At the rate your going, you'll make 300,000 before you catch 300,000 trout.
