I did exactly what Maurice does, without the tray. I kept it simple and tied only a few flies at a time. The tray would make it easier in a car, as I tied in a truck that had a big center consol that I used as a side bench. On overcast days, I had a reading light for the some added light. The kind that plugged in to the cig. lighter.

I actully did most of my tying in that truck, now I tie on my lunch break and have a little desk set-up. I have more room now and can tie a little more complicated flies, but that truck was pretty damn comfortable!!! No one nagged me and the music was always loud!! 😊
