if your doing he salmonyou'll most likely be doing chucking and flopping lead using heavy slinkys. best thing for this is a running line. that's if the stream is running fast and deep which is usually is. reverse a weight foward line to used the running line section. no need to buy a new line. strip line into a basket and flip the weight and fly like your casting a spinning rod. this is the most efficient method when its high and fast.
