As per my toothpaste tube:

"WARNING: KEEP OUT OF REACH OF CHILDREN UNDER 6 YEARS OF AGE. If you accidentally swallow more than used for brushing, get medical help or contact a Poison Control Center right away."

Sounds like adding massive amounts to water sources would be a wonderful idea!!!! Thanks Franklin's brother! And this would be the safer alternative?

That's probably the fluoride that the warning is for. The cellulose polymer of which some frack fluid is made comes from a bean plant that is a common food staple in India and Pakistan. Think vegetarian.
