Make yourself a tapered leader. where you attach the tippet to the leader put a nymph on the tag end and at the end of tippet. three inches from where you connected the two lines start with three very small shots 1'-3' apart rather than one big one. just so you fell them tip the bottom in a rythum. you want them to go tip...tip...tip...tip not tip.....tip..tip.....tip.....tip.tip. three of them will get stuck less than one big one they all will work with each other.
